DETAILED ACTION

Claim Rejections - 35 USC § 101

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim 12 is rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Claim 12 is drawn to “a computer program product comprising code...” A computer program embodiment must specify that the program is stored upon a tangible, readable medium, and that it is executable by a processor.

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 5-7, 12-14, and 17-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Cook et al. (5,802,309).
3. For claims 5, 12, 17, 18, Cook teaches a method and system (abstract) for extracting information from a network management object identifier (col. 1, line 1 – col. 3, line 45; col. 8, lines 30-35), the method comprising:
 - a. Extracting a first value from said identifier (col. 4, line 35 – col. 5, line 15);
 - b. Decompressing said first value to form a first group of elements of said identifier (col. 5, lines 15-50); and

Art Unit: 2145

- c. Extracting remaining elements from said identifier, said first group of elements and said remaining elements being associated with a single network management object (col. 5, lines 50-60).
4. For claims 6, 13, 19, Cook teaches that decompressing comprises forming elements of said first group of elements from decimal digits of said value (col. 4, lines 45-55; col. 6, lines 25-35).
5. For claims 7, 14, 20, Cook teaches that said network management identifier comprises an SNMP MIB object identifier (col. 6, lines 40-55).

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. They regard further teachings on compression and on SNMP MIB.
